The Master Grammar Book

Monday, July 17, 2023

The human race needs a Master Grammar Book for it is a biological imperative. In case you do not know what a biological imperative means, it means that we cannot survive until the mind of man is doing its own work. A mind is a life support system, and it is not doing that job good enough. This is due to evolution. Man is still evolving to become mentally functional. There never has been a prior, so called, golden age of man. A master grammar book is needed to aid in our evolution and thus our survival.

The Biological Imperative

A mind is the most powerful life support system possible for a life form and it performs its job wholly through the Art of Computation called judgement. Due to the meaning assigned to words, I call it, the Art of Prophecy; for our job is predicting behavior for survival.

A mind is designed to master the behavior of the body and environment in order to maintain and promote life just like every other life support system. Its job is to predict behavior before committing to it, i.e., to choose the most favorable behavior for survival. We are wholly responsible for how we respond to the environment all the time. And as mankind is still a savage, it makes it rather difficult to do the right thing at all times. We just need to improve.

In the simple, we learn to construct grammar systems in order to say what we see, and then we use those grammar systems to predict outcomes, our responses to what we see. The most universal and perfect grammar for teaching the relationship between body and mind, is hand and mind in a grammar system. That system is called geometry. All grammar systems are designed for parsing and computing with words using binary recursion. Every thing is a binary construct. The most elementary pairing binary grammar is Geometry.

Is there, in this world, anyone with enough intelligence and sense to comprehend this fact and what it means?

The job of a grammar book is to teach the pairing of all four members of our Grammar Matrix: Common Grammar, Arithmetic, Algebra and Geometry, geometry is the only grammar which presents you with the elements of things to name and learn the art of names with. These are the four methods of effecting binary recursion, each has a function it does better than the others, but not one of them can contradict the other because binary recursion only yields a binary result. Mankind contradicts all the time, but that is because mankind is illiterate. We are designed by biological fact, to master the environment for survival via literacy and literacy is certainly not what the simpletons of the past has claimed it to be. Judgment, effected by literacy, is over the whole of creation and it is effected wholly by the definition of a thing, a binary construct.

We are a mind, which means that we have a well-defined biologically determined job to perform and well-defined physically determined means of

doing our job. Binary recursion, as a mirror of every physical thing as a binary construct is a perfect method for doing our job. We have no other excuse for not doing our job other than stupidity.

If learning and teaching is learning and teaching binary recursion, it would be a sad thing to have anyone actually believe that we cannot master two, and only two concepts to do our job. Such a belief is the belief of a fatalist. I may get depressed from time to time, but I do not give up, for there is no other path for us.

A book is better than extinction. An education more powerful than an army of madmen.

These are the basic concepts, which sadly, I have found, no one able to master and act on. Is there anybody home?

For all those who, in my past, have asked, why do I study all the time? It is because I am alive, and being alive means I have to do my own work. I am not to be found on a social media network, I can only be found here, at the library, or sitting behind my working computers trying to make, not a buck, but a book.

Why has education today become a disgrace? What has social education removed from learning? The pairing with hand and eye to learn by. Geometry is that one pairing, which can be standardized globally, and it is the one grammar by which all grammar systems can be learnt. If one is interested in global literacy, at least have the wit enough to know which grammar can teach it.
